

Unit-1 Question Bank

SAQ

1. Define **Cloud computing**, Resource Provisioning, Resource Sharing, **Resource Pooling**, **Resource Virtualization**, Multitenancy, hypervisor.
2. List the benefits and challenges in cloud computing?
3. **List the type of services in cloud?**
4. Explain briefly three types of computing services.
5. Differentiate between SOAP and REST API?
6. **List the types of tenancy?**
7. Differentiate between static provisioning, Dynamic Provisioning and automatic provisioning of Resources.
8. Explain under provisioning and over provisioning of Resources?

LAQ

1. **Explain the Characteristics of Cloud Computing?**
2. Explain the benefits and challenges of Cloud Computing with neat illustration?
3. **Explain cloud deployment models in brief?**
4. **Explain the service models of cloud computing with illustration?**
5. **Differentiate between three types of Hypervisors?**
6. Differentiate between simple virtualization and Emulation based virtualization.

Unit-2

SAQ

1. Define Scaling, Scalability, capacity planning, Load balancing
2. Explain the goals of load balancer
3. Explain the categories of load balancer and list the types of load balancer
4. Explain the use of File system storage and challenges of cloud native File System

LAQ

1. Explain how scaling is done in cloud and explain scaling strategies with illustration
2. Compare different types of scaling with illustration.
3. Explain steps in capacity planning and how it is performed in cloud.
4. Write Short notes on SLA and its use at various service levels
5. Explain the use of load balancer and how it is done in cloud computing
6. Explain types of file system with illustration
